Re: Max Lopez
Postmaster Exam:
Woodsboro, Texas.

U.S. Civil Service Commission
Bureau of Recruiting and Examining.
Postal Examining Division
Washington, D.C. 20415.
Attention Mr. Henry C. Roberson, Chief.

Dear Mr Roberson:.

After studying the report of Dr. Arch C. Koontz, Woodsboro, Texas in reference to the Examinations conducted in 1953 and again 1959 and 1962, I believe that the condition of Mr Lopez during the examination of Oct 8, 1964 conclusively prove my statement submitted concerning the blackouts as due to increase blood sugar and diabetes.

The question therefore is that medically Mr Lopez on the date of examination Mr Lopez went into a mild diabetic attack. The question on a diabetes of Mr Lopez situation is one of the nature that requires the taking of orinase and a diabetic diet.

Since Mr Lopez is on orinase (diabetic oral medication) and on a diabetic diet I feel that his physical and mental condition is one that is very much different now. That is to say if he is given another examination he would be in a condition where he could be able to understand question, answer, etc.

It is unfortunate that Mr Lopez did not know of his situation on Oct 8, 1964. I feel that if he had known about it first that he would not have taken the examination and secondly he would have gone to his doctor for assistance in the control of the diabetic condition. Signed statments on the examination papers of Mr Lopez bear the notations to that effect.

I feel that medically Mr Lopez is in good contiin not only to take any kind of examination but to continue with his duties as postmaster.

Thank You.
Hector P. Garcia M.D.
